

EXTRAPOLATION TABLE for CROP SAFETY of HERBICIDES ^a

09-15609

► BULB VEGETABLES (seeded and planted) ^b

The extrapolation tables should be used in conjunction with EPPO Standard PP 1/257 Efficacy and crop safety extrapolations for minor uses. The tables provide detailed lists of acceptable extrapolations organized by crop groups for regulatory authorities and applicants in the context of the registration of plant protection products for minor uses. It is important to ensure that expert judgment and regulatory experience are employed when using these tables. EPPO excludes liability as to the reliability of the information provided through these tables.

		Crop: bulb vegetables			
1 Treatment type		2 ^c Indicator crops within the crop group	3 Extrapolation to other crops within the group	4 ^d Extrapolation from crops outside this crop group that enables reduced or no data* on the indicator crops	5 ^e Extrapolation to crops outside the crop group with reduced or no data*
	Herbicide group				
		One specific bulb vegetable under protected conditions	Same specific bulb vegetable in the field		Leek ALLPO
		Any seeded bulb vegetable crop	Transplanted onion ALLCE and shallot ALLAS	Leek ALLPO	Leek ALLPO

generally sown crops are more sensitive to phytotoxicity compared to planted crops.

^a This table should be used in conjunction with the EPPO Standard PP 1/257 Efficacy and crop safety extrapolations for minor uses. The scope for extrapolation may be extended as data and experience with a certain plant protection products increases.

^b For the purpose of this extrapolation table, 'Bulb Vegetables' are defined as: garlic, bulb onion, shallot, salad onion.

^c Note that it is commonly preferable to have data on several of the crops within the crop group, but data on the indicator crop should be available.

^d Column 5 identifies whether data from other crops against the same weed may enable a reduction in the amount of data required on the indicator crop (or no data on the indicator crop if the other crop is marked with an asterisk (*)). If this column is blank, the use of data from other crops is not possible/relevant.

^e Where extrapolation to other crops or crop groups is acceptable, then this is indicated in column 6. In column 6 crops marked with an asterisk (*) indicate that no data are required if appropriate data on the indicator crop is present. Note that column 6 is optional and should only be added to, or applied when there are clear possibilities for extrapolation to other crop groups.
